OUR SERVICE

Our core services can be divided into 3 categories:

- **Inspection**
- **Audit**
- **Testing**

© 2012 QUASATEK

INSPECTION SERVICE

- Pre-shipment inspection
- Production Monitoring
- During Production Check
- Initial Production Check
- Container Loading Check

© 2012 QUASATEK

PRE-SHIPMENT INSPECTION

- When 80% of your order is complete, an inspector visits the factory and uses industry standard processes to comprehensively review and test your product, ensuring it meets agreed upon specifications.

- **Why You Need a Pre-Shipment Inspection:** Don't take any risks with your order. Ensure the product you pay for meets your specifications before you settle final payment.

© 2012 QUASATEK

PRODUCTION MONITORING

- For challenging or sensitive orders, have an inspector monitor your production and report daily to identify and fix problems in real-time.

- **Why You Need Production Monitoring:** Production Monitoring puts an inspector onsite during the production cycle, representing your interests, to ensure production, materials, quality, schedules are at the level you and your manufacturer initially agreed upon.

© 2012 QUASATEK

DURING PRODUCTION CHECK

- A During Production Check (DUPRO) will identify any issues early in the manufacturing cycle, giving you the time needed to react and fix them.

- **Why You Need a DUPRO:** When around 20% of production is complete, take a deep dive into your production, processes, capacity, and goods and then make critical decisions at an early stage, and avoid potentially catastrophic surprises later in the production cycle.

© 2012 QUASATEK

INITIAL PRODUCTION CHECK

- An Initial Production Inspection will ensure your specifications are understood by the factory and to prevent any potential flaws in the production resources, materials, schedules, management and more.

- **Why You Need an Initial Production Check:** Avoid quality-related surprises during or after production. At the time of the IPC, consider Lab Testing services for quality assurance on materials.

© 2012 QUASATEK

CONTAINER LOADING CHECK

- Container Load Check is the final step in the manufacturing process. Ensure the final details of your product are correct and actual ordered quantity are securely loaded onto your container before signing off and settling final payment.

- **Why You Need a Container Load Checking:** Put an inspector onsite at the time of loading, to guarantee the product paid for is securely loaded.

AUDIT SERVICE

- Quality Management Audit
- Social Compliance Audit
- C-TPAT Audit
- Food Factory Audit

© 2012 QUASATEK

AUDIT SERVICE

- By now, there have been more than 55 auditors in our Asia Division, which could cover all around China, Thailand, Bangladesh and Vietnam. In this way, our people could provide the most on-time and efficient audit service to our customers.
- On the other hand, our localization make us understand the local laws, regulations and relative standards better, learn the way of local acting better, which could make sure that all the information provided to you is the fair, justice and transparent. You could learn the actual status of your venders from our reports, and finally find your qualified vendors.

TESTING SERVICE

- With our online platform you quickly find all the tests you need. Select your product category, country of manufacture, destination country.

- Testing with Quasatek allows you to seamlessly integrate your Laboratory Testing with your Product Inspection. Guarantee the sample is from your production lot, not a sample the factory wants you to test.
